

D-Link Reaches Beyond Connectivity at MWC 2013 D-Link Cloud Solutions Help Customers Get More from 4G/LTE

[South Korea, Seoul, 2013/2/19] This week, at the Mobile World Congress 2013 in Barcelona, D-Link unveiled a number of solutions that enable customers to use all the speed and flexibility of 4G/LTE connections in exciting new ways. The LTE connected home becomes reality with the DWR-926, an integrated access device (IAD). The personal LTE router is redefined by the go-anywhere, do-anything 4G Portable NAS Router, enhanced with D-Link's innovative cloud services. D-Link's 4G-VDSL Hybrid is also a great help that offers reliable connectivity and efficient load balancing capabilities. When customers need LTE for the most heavy-duty applications, the DWR-855 and DWR-955 industrial machine-to-machine (M2M) VPN gateways set a new standard for reliability and security.

"As a leader in high-speed wireless networking, we are very excited to combine the incredible speeds, low latencies, and high capacity of 3G/4G/LTE connectivity with our personal cloud capabilities, which are unmatched in the mobile industry," said GK Lee, Vice President of D-Link Mobile Service Providers Business Unit. "D-Link is uniquely positioned to understand the diverse needs of service providers on one hand, and businesses and consumers on the other, and bridge them with a wide range of cloud-enabled solutions that change the way the world connects."

No matter whether at home, out and about, or in the workplace, D-Link solutions help customers go beyond connectivity and do more with their 4G/LTE connections.

LTE Home

The DWR-926 LTE 11ac DECT IAD makes possible the modern LTE connected home. It supports up to four smart DECT handsets for VoLTE calling, and offers high-speed 11ac wireless network connectivity throughout the home for smoother high-definition video streams, VoIP calling, and online gaming on multiple wireless devices. The DWR-926 also integrates seamlessly with mydlink-enabled Cloud Cameras, media players, and network storage devices, so it's easier than ever to bring home the benefits of a mobile, social lifestyle.

4G Portable NAS Router

The D-Link 4G Portable NAS Router enables users to unlock the full potential of their connection practically anywhere, with the power of the personal cloud. It's available in two configurations: a home version with an illuminating base that looks great on any desk or shelf, and a second, battery-powered version that's designed to go out. At the push of a button the router creates a Wi-Fi hotspot, extends the range of an existing wireless network, or docks with a NAS for effortless file sharing.

4G-VDSL Hybrid Gateway

The D-Link 4G-VDSL Hybrid Gateway is a solution that perfectly integrates 4G & VDSL in homes. From live video streaming to ever-larger file transfers and real-time collaboration, today's Telco vendors strain the latest and greatest technology to its limits. D-Link's 4G-VDSL Hybrid Gateway is a great help that offers reliable connectivity and efficient load balancing capabilities. When needed, it provides dynamic load sharing and QoS control for IP traffic and ensures home users' enjoyment of triple-play service without any lag.

4G M2M Gateway

The rugged new DWR-855 Coolbox HSPA+ Router and DWR-955 Coolbox VPN 4G LTE/HSPA Router are designed for heavy duty applications. They offer integrated 4G LTE WAN and WLAN capabilities, as well as advanced features like seamless failover, always-on connection, redundant WAN links, and VPN connectivity for the ultimate in high-speed wireless access, all in a hardened metal housing. When conditions demand maximum reliability and serious security, the DWR-855 and DWR-955 provide the answer.
